Homework to 28/9:

Happy school would like to build basic system in python and would like to build the back-end part of this project.

School has 3 different categories of personal.

- Administration personal
- Teachers
- And student.
- Each has basic information as name, age address and mobile number.

We need to deliver these functions :

1- Create administration, teacher, and student.
2- Add students to teacher as student group.
3- Add student to classroom.
4- Print list of students in classroom
5- Print student group belong to the teacher.
